

Founded more than 70 years ago as a manufacturer of additives for oils, the family-owned company Raziol® Zibulla & Sohn GmbH has established itself successfully as a market leader in the area of lubrication and oiling technology and continuously expands its product portfolio with new product innovations.

Beside our classic roller lubricators, we can also provide our customers with entire spray lubrication systems of widths up to 4000 mm.

Continuous new developments, such as the Raziol® precision dosing unit for high-precision dosing of forming lubricants, enable us to quickly and competently respond to customer requirements.

Environmental protection as well as the prudent use of the scarce natural resources is of great importance to us. Therefore, the formulation of our mineral oil free fluid-range and the use of renewable energies are the visible consequence of our environmental awareness.

Based in Iserlohn, we can provide you with an optimally functioning and well-coordinated all-round package which of course includes advice and services such as repairs, inspections, modernization and training.
